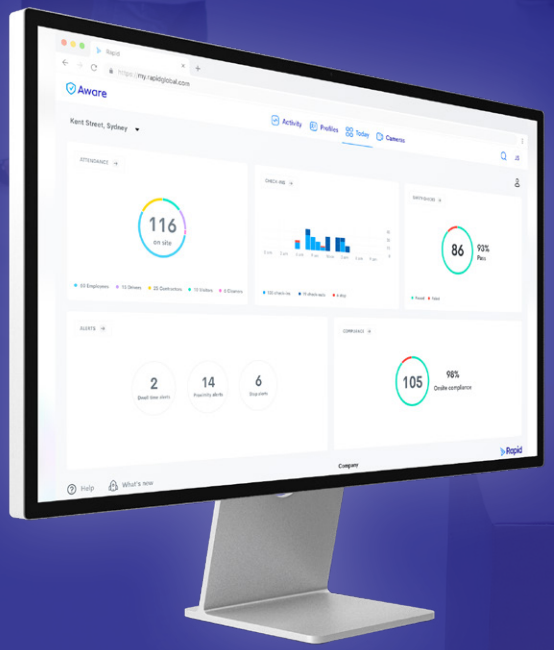
Rapid Aware

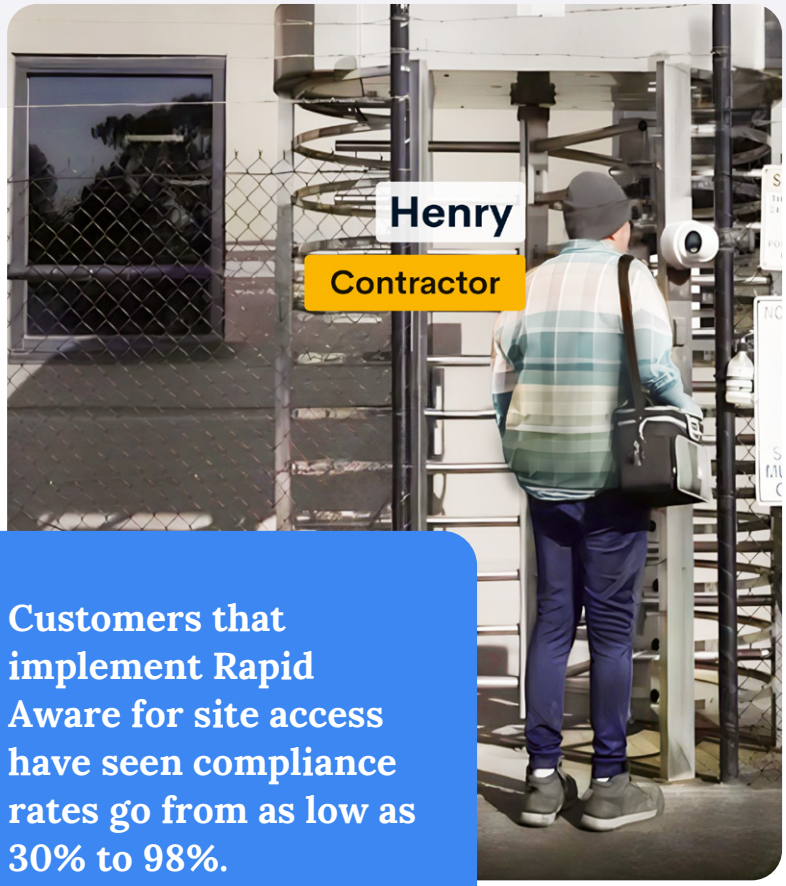


# Make your **workplace safer**

With our AI-powered computer vision technology.

# **Secure perimeter access** for pedestrians and vehicles

Rapid Aware automatically identifies individuals with face authentication at the gate, checks their compliance, and grants access if inducted and authorised.



**Customers that implement Rapid Aware for site access have seen compliance rates go from as low as 30% to 98%.**

## Achieve site-wide compliance

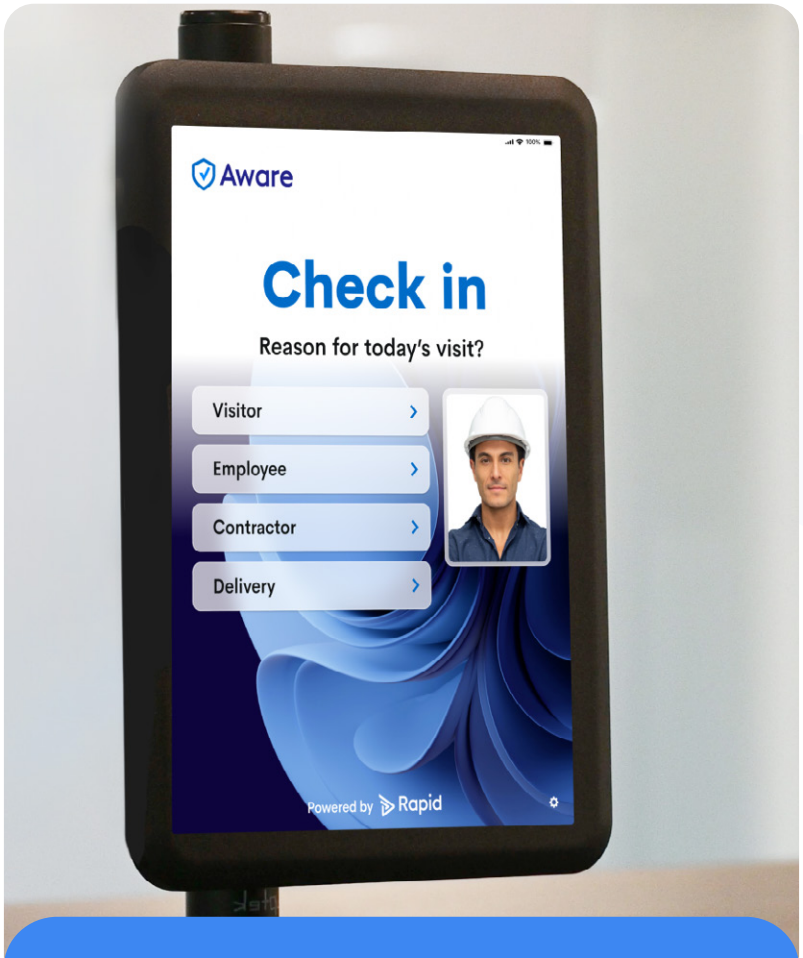
Rest easy knowing only inducted and compliant personnel can access your site.

## Automate vehicle entry and exit

Verify vehicles with licence plate recognition to facilitate access and capture dwell times.

## Save on access management

Eliminate the cost and hassle of manned entrances, employee ID cards, keys, and fobs.



# Welcome visitors with a seamless check-in

Turn an iPad into a check-in kiosk. Perfect for indoor environments to safely welcome visitors, employees, and contractors.

## Make a good first impression

Customise the iPad kiosk with your company logo, colours and messages. Enable people to check in with face authentication or a QR code.

## Customise visitor workflows

Perform ID and compliance checks and allow workers to complete inductions that are pending. Set up various check-in flows based on visitor type and create custom surveys.

## Receive alerts and pair with access

Receive host notifications for guests including attendance alarms. Integrate with access control to open internal doors with a simple face check.

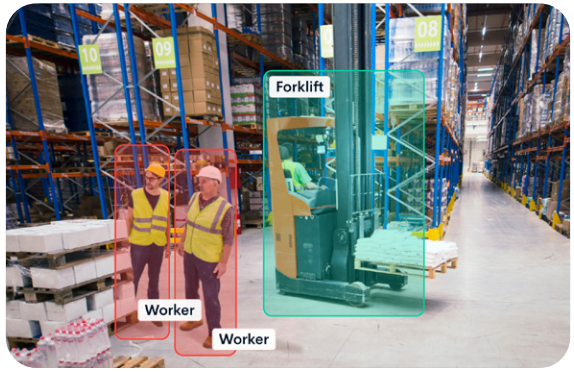
> **"Rapid Aware provided a solution to quickly and easily scan workers' faces and cross reference against our database. Our check-in/check-out procedure was streamlined to seconds per worker."**
>
> *Charlie Jabbour, Construction Manager, Buildform*

# Enhance safety with **AI-powered object detection**

Integrate Rapid Aware with workplace cameras to gain better awareness of unsafe acts and hazards. Detect a range of issues to proactively improve safety processes and operations.

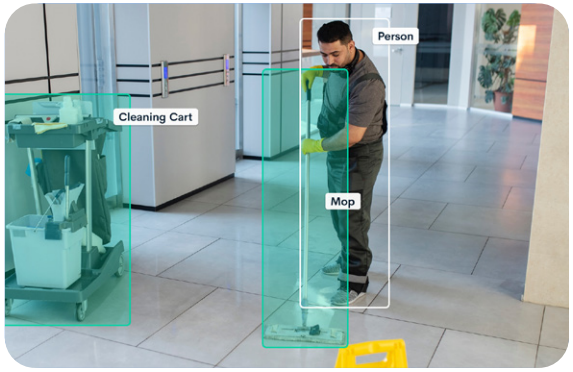
## Track PPE compliance

Track instances of missing PPE, such as hard hats and hi-vis vests. See trends over time for different areas of the workplace.



## Monitor forklift proximity

Identify close encounters between forklifts and pedestrians with proximity alerts. Be alerted in real time and easily see if such incidents are trending up or down.



## Detect mobile and cleaning activity

Track the use of mobile phones in restricted areas. See cleaning activity across distinct locations and time periods to ensure tasks are being completed.

# Unlock more **workplace insights**

Gain real time visibility into unsafe actions that can be leading indicators for more serious incidents. Record and review trends to proactively enhance workplace safety.

## Identify previously unseen issues

Rapid Aware can identify a wide range of issues such as someone lying on the ground hurt, someone on the roof dangerously close to the edge or someone climbing a fence.

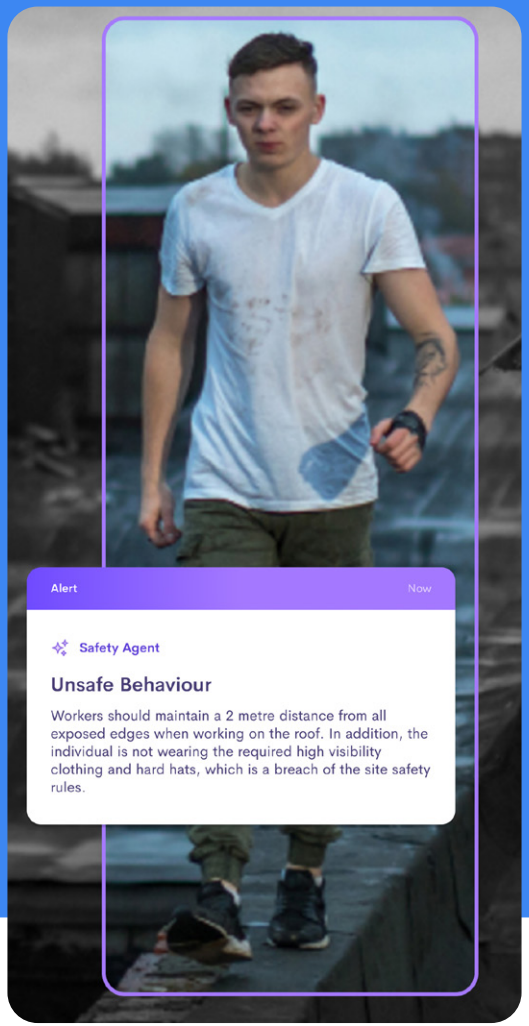
## Improve gaps in safety

Use the insights to focus on the implementation of corrective actions that address the most significant issues.

## Enforce your safety rules

Optionally provide extra information to help Rapid Aware identify the events you care about. This includes your preferred alarm schedule.

**In Australia, 31% of incidents fail to be reported.**



# See insights across **multiple sites in one platform**

View all check-in activity, attendance data, and safety issues from one easy to use web app. Manage alarms, see the compliance rate on-site and export data for reporting.

## View check-in and attendance data

See the attendance data of people checking in and out, who is currently on-site, and auto populate timesheet data to streamline payroll.

## Observe vehicle dwell times

Capture accurate dwell times and receive alerts to ensure vehicles do not exceed their allotted time. View live cameras at each checkpoint.

## Receive real-time alerts

Receive host notifications, blacklist alerts, and safety monitoring alarms via email or push notification. Be informed if staff or contractors have not checked in by a specific time.

Rapid Aware includes AI Assist which allows users to access specific knowledge and insights simply by typing a question to receive an answer.

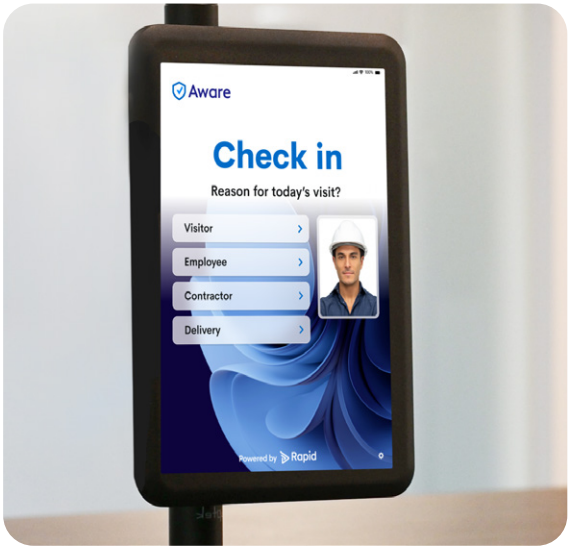
# **Hardware** requirements

## IP cameras

Rapid Aware seamlessly integrates with your existing IP and LPR cameras (subject to their placement, the site layout, and the detection requirements).

## Server

A dedicated server is required when integrating with IP cameras to monitor the workplace or secure perimeter access with ID and compliance checks. This server works side by side with your VMS or NVR.



## iPads

Our check-in kiosk solution requires only an iPad running the iOS Doorkeeper application. Additional hardware is required for checks such as temperature and BAC, and for access control.
