

**Set.
Schedule.
Perform.
Track.**

What Is Rapid Service Alert?

Imagine a system that enables you to schedule the maintenance of your equipment with greater efficiency and accountability. Rapid Service Alert from Rapid Global is an easy to use online software system for the scheduling and allocation of equipment maintenance and service alerts to suppliers and internal staff.

An online asset management software system, Rapid Service Alert allows your team to schedule regular reminders for the maintenance of equipment. As a system that enables instant notifications of service requirements, the program has the ability to be used for regular reminders such as audits, fire inspections and checklists. Any regular planned maintenance/task can be scheduled and tracked in Rapid Service Alert with notifications and alerts delivered to the allocated responsible person or contractor/supplier.

Rapid Service Alert is simply the easiest and most systematic way of getting the right people on the right service or maintenance job at the right time.

Features

- Set, schedule, track and escalate regular planned maintenance or tasks.
- Adaptable to any task, item or plant – i.e. fleet servicing, machinery maintenance, audit reminders, etc
- Ability to set frequency and actions.
- Attach documents – i.e. JSEA/ SWMS, worksheets, procedures and clearance certificates.
- Notifications able to be sent to key personnel.
- Alert contractors and employees of the regular task and allocate responsible persons.
- Increased efficiency and accountability. It will always be clear as to who is responsible for what job and you will be able to keep track instantly of any job that has not yet been completed. This means you have much tighter control of your resources and no more wasted or lost time.

Rapid Global Products Integration

Integration with your existing systems or third party software is available. Rapid Service Alert can also be combined with other Rapid Global software solutions to create greater efficiencies and perform related tasks:

Rapid Hazard Management software - control measures applied to hazards can be allocated as serviceable items in Rapid Service Alert ensuring the hazard is regularly serviced and controlled.

Rapid Induct software ensures all contractors are inducted and trained appropriately before they come to site to perform service tasks.

Ask us how Rapid Global can tailor a custom package from our suite of complementary products.

How Rapid Service Alert Works

Just like servicing a car, Rapid Service Alert provides a systematic method of maintaining equipment.

List your assets and equipment in Rapid Service Alert, including what needs to be maintained, how frequently it needs to be maintained, who is going to complete the service and whether it will be serviced by a contractor or an employee.

Your team will then be able to plan all of their future services and work, provide feedback as to how that work has been performed and have a ready register of all work completed.

Dashboard overview

Calendar and maintenance planner

A screenshot of a 'Preventive Maintenance' complete listing. At the top, it shows '45/96' items. Below this, there are four circular gauges: '45' in a green circle, '15' in a red circle, '2' in a yellow circle, and '34' in a blue circle. The main part of the screen is a table with columns for 'Name', 'Due Date', 'Status', 'Priority', and 'Assigned To'. The table lists various equipment items with their respective maintenance schedules and current status.
