

Request. Validate. Issue. Work.

What Is Rapid Permit To Work?

What if your workers and contractors could request work permits and authorisation directly from a conveniently located iPad or tablet?

What if your management team could validate and issue any type of work permit from their computer, iPad or tablet? You can with Rapid Permit To Work from Rapid Global.

Rapid Permit To Work is a flexible work authorisation and permit to work compliance software system that enables your organisation to gain control over high risk activities and meet workplace safety regulations. Supporting the entire lifecycle of every permit and work authorisation to ensure all necessary documentation is provided and procedures are completed. Fully configurable, Rapid Permit To Work supports all work permit types such as Confined Space Entry, Hot Work and Working at Heights to name just a few!

Any permit that is required to be issued or managed can be included in this electronic system, ensuring all work authorisation records are efficiently and accurately managed. Work permits are centrally located for each job or work order, along with other essential information such as safe work method statements or job safety and environmental analysis forms (JSA's). When the job is completed the permit to work forms are closed and any issues or hazards are reported with alerts sent automatically to site management.

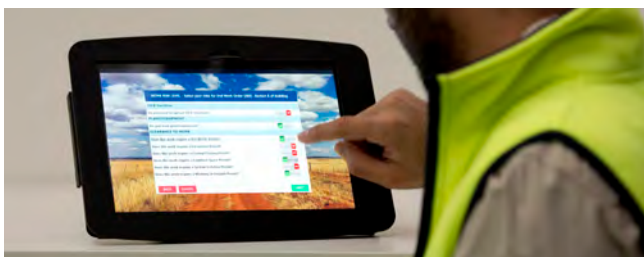

iPad and tablet compatible for excellent mobile access for all workers and to suit all workplace environments.

Typical Permits Include:

- Hot Work
- Entry into Confined Spaces
- Excavation/break-in
- Work at Heights/Roofs
- Electrical Work
- All Clearance Certificates

From high risk work industries like construction and manufacturing to property management, Rapid Permit To Work is ideal and customisable for any business or industry that requires permits to be validated or issued on site and prior to commencing work. Some of Australia's largest companies like Mirvac already rely on Rapid Permit To Work to issue permits on site.

Rapid Permit To Work is simply the most efficient way of issuing permits to get the right people on the job faster.

How It Works

Main Benefits

- Reduces risk and increases on-site safety
- Simple to use and customisable to any business or industry. Able to incorporate all permit types.
- Ensures permits are easily requested by contractors and employees at a conveniently located tablet on site.
- Significantly improves the communication process for requesting permits and ensures all permits are stored centrally across the organisation.
- Provides a paper trail for all permits requested, approved or rejected.
- Ensures a standardised approach and provides greater management process control.

Work Authorisation Systems To Reduce Risk

Rapid Permit To Work can be combined with Rapid Induct, Rapid Access Systems and Rapid Contractor Management to provide an end to end integrated safety management system. When a contractor is successfully inducted and their company is deemed to be compliant, they can arrive at site and select a work order via the Rapid Access System touchscreen or tablet. As soon as they sign in, the system recognises who they are and what work they are there to complete. The system will then issue any relevant safety alerts and match their SWMS with their work order.

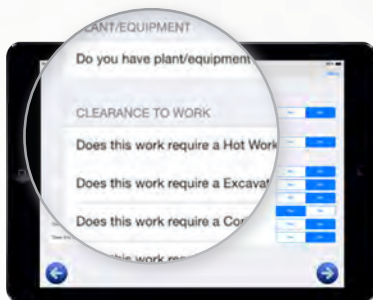

If amendments are made to the work order by the worker, a site representative/manager is alerted immediately. The Rapid Permit To Work System then presents the contractor with a series of questions to determine the type of work they are doing and if it requires additional permits, training etc. A nominated site representative is then automatically notified to approve or reject the contractor's access to site.

Features

- Permits requested electronically by a contractor with auto alerts sent to site management.
- Easy access for all workers to request work permits via tablet or iPad.
- All permits are able to be customised and included in the system.
- Managers are notified immediately via email when a permit request for their area is submitted for approval.
- Provides reliable and consistent data evidence of permits issued.
- Paperwork is able to be attached to work orders or jobs and stored in the system.

Integrated Safety Solution

“The solution provides a robust system to manage contractor pre-engagement, the communication of safety culture, policies and procedures through online training and stringent control of on-site hazardous activities through the on-site automated permit to work and access control software.”

Rapid Global Products Integration

Integration with your existing systems or third party software is available. Rapid Permit To Work can also be combined with other Rapid Global software solutions to create greater efficiencies and perform related tasks. Complementary products include:

Rapid Induct online learning management system for the creation and delivery of online induction and training courses.

Rapid Contractor Management online software for the control of contractor compliance.

Rapid Access Systems for the control of site access to compliant, inducted and relevant personnel only.

Ask us how Rapid Global can tailor a custom package from our suite of complementary products. **Call 1800 307 595 (AU).**
